We are supporting **Heerema Marine Contractors'** largest semi-submersible crane vessel with LNG in Norway for the first time. Sleipnir is 220 meters long and 102 meters wide and will be operating in the North Sea during 2020. We may support Heerema projects with environmentally friendly fuel in the months to come. The LNG came from our production plant close to Stavanger. Sleipnir was bunkered in Åmøyfjorden by one of our bunkering vessels, Kairos. [#navigateforward](#)
